EDUCATION

UNIVERSITAS AIRLANGGA

Bachelor of Information System

Cumulative GPA: 3.53/4.0

Thesis : Session-based Recommendation System using Gated Graph Neural Network and Attention Mechanism on E-commerce

Surabaya

Aug 2019 – Aug 2023

WORK EXPERIENCE (3 Years of Experience)

Insignia

Mid. Data Engineer

Jakarta

Apr 2025– Now

- Spearheaded the end-to-end modernization of a legacy big data ecosystem to a scalable AWS cloud platform, enhancing data accessibility for enterprise-wide analytics and significantly reducing operational overhead.
- Led multiple projects related to the client Unified Data Platform, including data standardization, metadata centralization, cross-domain ingestion pipelines, and a unified schema framework for analytics and AI teams.
- Architected and deployed a data lakehouse solution using Apache Iceberg on S3, establishing a transactional, governed data foundation that supports both business intelligence and advanced analytics.
- Created a modern, scalable data lake specifically designed to support network anomaly detection, including structured log storage, standardized schemas, and optimized access patterns for machine learning workloads.
- Engineered robust, event-driven ETL/ELT pipelines using AWS Glue, Lambda, and Airflow to ingest and process complex data from diverse sources, including SQL, NoSQL, HDFS, and real-time network feeds.
- Delivered a governed, Medallion-architecture data repository that serves as the single source of truth for business intelligence (Quicksight), ad-hoc querying (Athena), and critical data science initiatives, including network anomaly detection and AI-powered chatbots.
- Established a robust data governance and operations framework using AWS Lake Formation and CloudWatch, delivering a centralized data catalog, data lineage, and fine-grained access controls for all enterprise data assets.
- Engineered a comprehensive ingestion framework using AWS Glue, DMS, and Kinesis to unify batch, streaming, and change-data-capture (CDC) from diverse enterprise sources, including Oracle, SQL Server, and SFTP.
- Established a mature CI/CD pipeline with GitHub Actions for automated Glue script deployments and implemented rigorous database performance tuning, which improved development velocity and reduced data processing times.

Tech: AWS (Glue, S3, Athena, Lake Formation, Lambda), Airflow, Iceberg, Python, GitHub Actions, Snowflake, Databricks

Skills: ETL/ELT, Lakehouse Architecture, CDC, Data Governance, Orchestration, Cloud Engineering

NTX Solusi Teknologi

Data Engineer

Jakarta

Dec 2023 – Mar 2025

- Architected and optimized ETL/CDC pipelines and data lake implementation using MinIO, while orchestrating workflows with Prefect to ensure smooth and scalable data processes.
- Enhanced data reliability by integrating validation tools like Great Expectations, detecting and resolving 95% of data anomalies before ingestion.
- Designed and maintained normalized and denormalized data models in PostgreSQL and MongoDB to support analytical dashboards and machine learning workflows.
- Implemented a scalable data lake solution, ensuring efficient storage and retrieval of structured and unstructured data.
- Improved search relevance by 35% by developing and deploying a high-performance vector search system using HNSW.
- Achieved 95% accuracy in Named Entity Recognition (NER) models for automated report generation through MLOps practices, including experiment tracking, model registry, and monitoring.
- Launched a production-grade Large Language Model (LLM) solution that reduced client report creation time by 90%, enhancing operational efficiency.
- Boosted system reliability by implementing CI/CD pipelines and introducing monitoring solutions via Prometheus and Grafana, achieving 90% uptime.
- Established standardized data engineering workflows and documentation, enhancing team productivity by 40% and cutting project delays by 25%.
- Implemented data catalog solutions such as Amundsen and DataHub to enhance data discovery, reducing data retrieval times by 50% and increasing data compliance by 35%.

- Fostered a culture of continuous innovation by experimenting with emerging technologies, leading to a 20% annual improvement in operational efficiency and a 60% rise in tech adoption.

Tech Stack : Prefect, Postgresql, MongoDB, OpenRefine, MinIO, Docker, FastAPI, MLFlow, Airbyte, Amundsen, DSPy, Langchain, GreatExpectation,, LakeFS, Redis, Elasticsearch

Skills: ETL, Change Data Capture, Data Orchestration, Data Warehousing, Data Governance, AI, MLOps, LLM

PERGA

Hamburg, Germany (Remote)

AI Engineer

Mar 2023 – Jun 2023

- Developed solutions for Named Entity Recognition (NER) and document classification using the concepts from the LayoutLM paper, achieving an impressive accuracy rate of 92% at the first checkpoint.
- Devised and implemented a rule-based approach for Named Entity Recognition, enhancing the precision and efficiency of entity recognition tasks.
- Conducted extensive research on document-based AI models for 2 AI models on apps, generating valuable insights that contributed to the company's advancements in this domain.
- Configured Label Studio to streamline data labeling processes and successfully labeled 200+ company document data.
- Spearheaded the creation of 3 main AI features for the application, significantly elevating its overall functionality.
- Collaborated with universities on the preparation of review papers, fostering productive partnerships and knowledge exchange in model development. Engaged in 2 model feature discussions with universities.

Tech Stack : Python, PyTorch, Label Studio

Skills: Debugging, Production Ready, Data Cleaning, Label Studio, Named Entity Recognition, NLP

SG-EDTS

Jakarta

Data Science and Analytics Intern

Jan 2022 – Apr 2022

- Completed 4 data science & analytics courses and gained hands-on experience.
- Researched state-of-the-art machine learning algorithms from research papers.
- Designed, developed, and implemented a client (e-commerce) recommendation system model using the SVD++ model, achieving an MSE score of 0.844 and an MAE score of 0.384.
- Constructed and fine-tuned 3 business performance dashboards with scope analysis using Tableau.

Tech Stack : Python, Tableau, BigQuery, Excel, MLFlow

Skills: Recommendation System, Research, Machine Learning, Exploratory Data Analysis

CERTIFICATION

AWS Certified Data Engineer

Issued Aug 25 - Expires Aug 28

AWS(Amazon Web Service)

TECHNICAL SKILLS

Cloud & Data: AWS (Glue, Redshift, Athena, S3, Lambda, EventBridge), Snowflake, Databricks, Iceberg, Delta Lake, DuckDB

Pipelines & Orchestration: Airflow, Prefect, Step Functions

Databases: PostgreSQL, MongoDB, Redis

ML & AI: MLFlow, TensorFlow, PyTorch, LangChain, DSPy

Tools: Git, Docker, Elasticsearch, Power BI, Tableau

ADDITIONAL

Knowledge of : Machine Learning, NLP, Recommendation Systems, MLOps, Time Series, Data Visualization

Awards: Top 5 AI Startup Final Project by PT. Orbit Future Academy.
